

Prevent Theft Before it Happens

Without Guards or Infrastructure

Mobile Security Towers
Portable, Self-Powered, AI-Driven Monitoring

Why Mobile Security Towers

- Replace costly overnight guards
- Eliminate blind spots and missed incidents
- Scalable across multiple locations
- No capital investment required

Cost-effective Security That Works

- Fraction of the cost of 24/7 guards
- No overtime, turnover, or gaps in coverage
- Immediate deterrence reduces theft and vandalism
- Monthly service model – no upfront cost

Mobile Security Towers are Ideal for

- Construction sites
- Parking lots & garages
- Vacant properties
- Commercial developments
- Events & temporary sites
- Data centers & remote infrastructure

Flexible Security and Rapid Deployment

Scutum Digital's mobile security towers provide immediate, standalone protection for sites where traditional systems fall short.

- No trenching or wiring required
- Solar-powered with battery backup
- Cellular / wireless connectivity
- Fully operational within days

Built for Real-world Conditions

Engineered for demanding environments:

- High-resolution surveillance cameras
- Day/night visibility
- All-weather construction
- Autonomous power options
- Wireless data transmission

Capture clear, actionable footage for investigations and insurance claims.

How It Works

AI-powered detection combined with trained security operators ensures every event is handled in real time:

- AI detects activity
- Operator verifies instantly
- Live voice-down warning issued
- Guards / police dispatched if needed
- Full incident report delivered

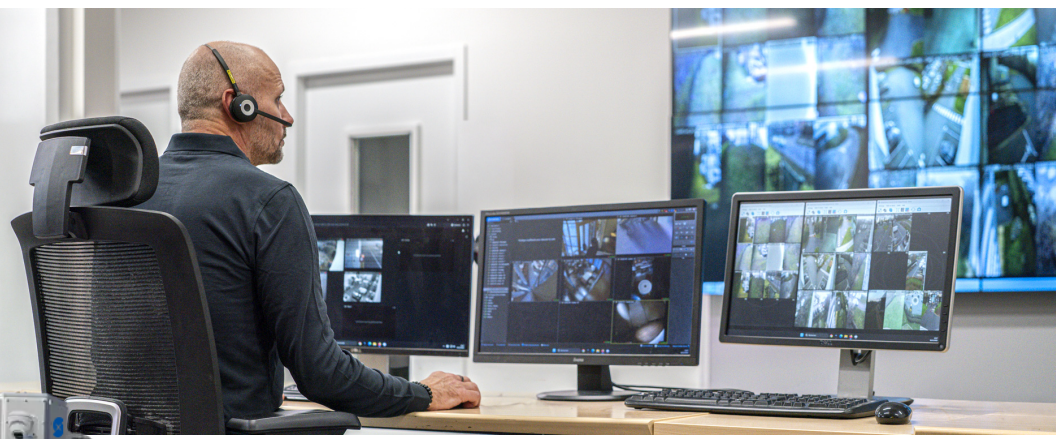

We're Different

Most mobile tower providers offer cameras that record incidents.

Scutum Digital delivers a fully monitored, actively managed security system that detects, verifies, and stops incidents in real time.

That's what sets Scutum Digital apart — turning problems seen into problems prevented.

AI identifies suspicious behavior. Our team takes action.

24/7 Live Monitoring (Human + AI)

Unlike systems that only record or send alerts, Scutum Digital provides active security intervention.

- Real-time threat detection
- Immediate human verification
- Live talk-down capability
- Rapid escalation protocols
- Reduced false alarms

Key Advantages of Scutum Digital

- Dedicated monitoring specialists — not a call center
- Proven enterprise deployments nationwide
- AI + SOP-driven human response
- Seamless integration with guards and site teams
- Approved vendor with multiple insurance providers

FAQs

Overview

What is a Mobile Security Tower?

A self-contained surveillance system with AI cameras, audio speakers, and wireless connectivity that can be rapidly deployed and monitored remotely.

How is Scutum Digital different from other providers?

Unlike standard recording-only systems, Scutum Digital combines AI detection with live operator monitoring and immediate real-time response.

Do mobile security towers actually prevent crime?

Yes. High visibility, AI detection, and live audio intervention deter intruders and often stop incidents before they escalate.

Monitoring & Response

What happens when activity is detected?

AI detects activity, a live operator verifies it, and immediate action is taken—such as audio warnings, guard dispatch, or contacting authorities.

Is the system monitored 24/7?

Yes. Monitoring can run continuously or be scheduled based on site requirements, including overnight and after-hours coverage.

Why is live monitoring important?

Without monitoring, incidents are only recorded. With monitoring, threats are actively identified, verified, and addressed in real time.

How effective is audio talk-down?

Highly effective—most intruders leave immediately once they realize they are being actively monitored and addressed live.

Value & Comparison

Can mobile security towers replace guards?

They can replace or significantly reduce guard needs in many scenarios, especially for large sites or after-hours coverage.

We already have cameras or guards—why add this?

Traditional cameras only record incidents, and guards have limited coverage. Scutum Digital provides full-site visibility and immediate response.

What is the ROI compared to guards or traditional security?

Scutum Digital typically reduces security costs by replacing or supplementing guards while providing broader coverage, faster response, and fewer incidents—resulting in lower overall risk and operating cost.

What is Scutum Digital's key advantage?

A fully integrated system combining hardware, AI detection, and live human response in one managed solution.

How does it reduce risk and liability?

By improving response time, preventing escalation, and providing documented incident reporting and actions.

Deployment & Technology

Do the towers require power or internet?

No. They operate using solar power, battery backup, and cellular or satellite connectivity.

How quickly can towers be deployed?

Typically within a few days, with no trenching, wiring, or site infrastructure required.

Where are mobile security towers used?

Construction sites, industrial yards, vacant properties, parking areas, and other temporary or high-risk locations.

Scutum Digital delivers AI-powered monitoring and managed security that detects, verifies, and responds to threats in real time. Backed by the global Scutum Group, we provide scalable, cost-effective protection for commercial and enterprise environments.

Specifications

Mobile Security Towers

A fully self-contained, rapidly deployable security solution designed to deliver remote video monitoring, active deterrence, and elevated situational awareness—without the need for fixed infrastructure.

Multi-lens
Cameras

Wireless
Access Point

Speakers
& Blue Strobes

Solar
Panels

Batteries
& Back End

Rapid Deployment. Intelligent Monitoring. Immediate Deterrence.

Core Capabilities

- Remote monitoring integration for proactive intervention and response
- 360 degree surveillance coverage
- 5G Cellular/Starlink connection provides reliable network
- Active deterrence utilizing speakers and strobes
- Rapid deployment

Specifications

Product Type	Mobile Security Tower
Mast	22 ft crank-up mast
Power	400 watt solar power
Batteries	6 batteries
Video	(4) 4K turret, 8MP cameras
Coverage	360 degree HD view
Deterrence	Speaker and blue strobe
Connectivity	5G Cellular / Starlink
